

Laravel + React Modern Architecture Starterkit

Tujuan Arsitektur

Arsitektur ini dibuat agar project tetap:

- Rapih
- Mudah dicari
- Mudah maintenance
- Scalable
- Tidak overengineering
- Cocok untuk solo developer maupun team kecil - menengah

Filosofi Arsitektur

Frontend menggunakan Feature - Based Architecture.

Backend menggunakan Layer - Based + Feature Grouping.

Tujuan utamanya adalah setiap fitur memiliki rumahnya sendiri dan setiap folder memiliki satu tanggung jawab jelas.

Final Frontend Structure

```

Final Backend Structure

```

backend/

Mental Map Development

Frontend:

- features = business domain
- pages = halaman fitur
- components = UI khusus fitur
- hooks = React Query logic
- services = API logic
- schemas = validation
- stores = state management

Backend:

- Controllers = request masuk
- Requests = validation
- Services = business logic
- Repositories = database query
- Models = relasi database

Contoh Penambahan Fitur Baru

Saat membuat fitur baru Product:

Frontend:

features/product/

■■■ pages/

■■■ components/

■■■ hooks/

■■■ services/

■■■ stores/

■■■ schemas/

■■■ routes/

Backend:

Controllers/Product/

Requests/Product/

Services/Product/

Repositories/Product/

Models/Product.php

Flow Development

Frontend Flow:

Page

↓

Component

↓

Hook

↓

Service/API

↓

Backend API

Backend Flow:

Request

Kesimpulan

Fokus utama arsitektur ini adalah:

- consistency
- simplicity
- maintainability
- scalability

Architecture yang bagus bukan yang paling banyak folder,
tetapi yang paling mudah dipahami dan dipelihara dalam jangka panjang.
